DE BETHUNE DB25XS SAND WINDS

Nature as a source of inspiration, titanium as the epitome of excellence: De Bethune unveils the DB25xs Sand Winds.

A radiant dial

The titanium dial of the DB25xs Sand Winds combines two exclusive finishing techniques developed by the Manufacture: random guilloché and natural oxidative heat treatment. Together, they create a yellow surface featuring a mesmerising hypnotic shimmer evoking the ripples of wind across vast expanses of sand.

Its vibrant colour makes a perfect match with the warm tones of the polished yellow titanium hands and hour-markers as well as the subtle gleam of the white gold inserts.

Design and comfort

The DB25xs Sand Winds features the signature round case of the DB25 series, featuring slender lines and hollowed-out, tapered lugs designed to provide a comfortable fit on the wrist. Crafted from grade 5 titanium and hand-polished, it combines a 40 mm diameter with exceptional lightness, ensuring a comfortable feel on all wrist types.

A modern, refined calibre

Fitted with a sapphire crystal with anti-glare coating on both sides, the caseback reveals the excellence of a movement finely adorned with Côtes De Bethune and polished blued titanium. Mechanical hand-wound Calibre DB2005 beating at 28,800 vibrations per hour incorporates the Manufacture's latest innovations: a titanium balance wheel with white gold inserts, a balance-spring with flat terminal curve, a triple pare-chute shock-absorbing system and a silicon wheel. Its self-regulating twin barrel ensures a constant six-day power reserve.

The DB25xs Sand Winds is paired with an exceptionally supple lined brown alligator leather strap and a matching polished titanium pin buckle.
